

StockAI PRO: The Ultimate Newbie Handbook

Welcome to **StockAI PRO**! Imagine having a team of seasoned Wall Street analysts working for you 24/7. That's exactly what this app is. We've combined real-time global market data with absolute state-of-the-art Artificial Intelligence (Llama 3 & Gemini 2) to give you institutional-grade trading insights—all wrapped in a gorgeous, easy-to-use terminal.

Whether you're looking to track Indian stocks, mutual funds, or global titans like Apple, everything you need is right here.

This guide will walk you through your brand new dashboard. Let's get started! 🚀

Navigating the App

The application is split into three main "Power Centers", accessible via the top navigation bar:

1. **Overview**: Your personalized market dashboard.
2. **News AI**: An automatic news intelligence engine.

3. **Predictions:** Your historical and predictive AI tracking room.

1. The Overview (Dashboard)

This is your mission control. It gives you a bird's-eye view of everything happening in the markets currently.

How to Track a Ticker (Adding Stocks to Your Watchlist)

Want to keep an eye on a specific company?

1. Click the glowing **+ TICKER** button.
2. Type in the **Symbol** (e.g., **RELIANCE** for Reliance Industries, **TSLA** for Tesla, **NIFTYBEES** for your favorite ETF).
3. (Optional) Give it a customized name.
4. Click **Submit**. *Boom! The stock is now permanently pinned to your live Watchlist, streaming real-time prices and 24-hour change percentages.*

Global Search (The **CTRL+K** Bar)

At the top of your screen, there is a **Search Bar**.

- **Global Power:** Start typing any company name or ticker symbol. The app instantly connects to Yahoo Finance and searches the entire globe for your stock, ETF, or mutual fund.
 - Once you see your asset drop down, simply click it to enter the **Trading Terminal!**
-

2. The Trading Terminal (Stock Details)

When you click on any stock in your watchlist or from the search bar, you'll be transported to the Terminal.

Cinematic Candlestick Charts

- The large chart in the center is plotting real-time **OHLC** (Open, High, Low, Close) pricing. Green means the price went up, Red means it went down.
- **Timeframes:** Above the chart, you can click **1D** , **5D** , **1M** , or **1Y** to zoom in and out of the asset's history.
- **Intraday Mode:** Click the **Intraday (5m)** button to watch the live, minute-by-minute heartbeat of the stock.

AI Market Predictions

On the right side of the terminal, you'll see a dark glass panel named **AI Consensus**.

- The moment you open the terminal, our **Llama 3.3 70B NLP Engine** reads the stock's volume, price history, technical indicators, and news—and spits out a human-readable summary of what it expects the stock to do next. Is it Bullish? Bearish? It will tell you with a confidence score!

Highlight Markers

See those little colored arrows sitting on the candlestick chart? Our backend math engine actively scours the chart for famous Wall

Street candlestick patterns (like **Doji** , **Hammer** , or **Bearish Engulfing**).

- If you click on one of the pattern names in the list below the chart, the camera will smoothly **pan and zoom** directly to that exact spot on the chart so you can see the anomaly for yourself!
-

3. News AI (Global Market Intel)

News moves the market, but reading 50 articles a day is impossible. Let the AI do it for you.

Force Sync DB

Click the "**FORCE SYNC DB**" button.

- The application will immediately contact 6 top-tier financial news networks (like *Reuters*, *LiveMint*, *NDTV*), download the latest articles, and feed them directly into the **Gemini 2.0 AI Engine**.
- Gemini reads the articles, extracts whether the news is good (**Bullish**) or bad (**Bearish**) for the economy, highlights the most important 3 bullet points, and tags any specific companies mentioned.

Dynamic Filtering

Once the news loads, you can click the neon colored filter tags at the top (**BULLISH** , **BEARISH** , **NEUTRAL**) to isolate the exact vibe of the market you want to read about.

4. Predictions (Performance Analytics)

Are we actually making good predictions? This page proves it.

- The backend logs every single AI prediction made across the platform.
 - Over time, as stocks go up or down, this page tracks the win-rate and accuracy of the AI so you know exactly how much you can trust the machine!
-

Mobile Friendly!

Out and about? Everything you've just read is 100% optimized for your mobile browser. The terminal charts resize, the menus tuck away neatly, and the data grids stack perfectly so you can execute trades and read AI specs from anywhere.

Happy Trading! 📈
